VALUATION ANALYSIS (Equity Securities Only, Weighted Median Unless Otherwise Noted)

AVERAGE ANNUAL TOTAL RETURNS (Annualized for Multi-Year Periods)

	Since Inception	Five Years	Three Years	One Year	Year-To-Date	1Q 2017
International Value Fund	2.77%	4.67%	0.64%	21.89%	10.09%	10.09%
Russell Global® ex-US Small Cap Index	5.25	6.18	2.41	13.42	8.98	8.98

Performance data quoted for periods prior to 10/1/13 for the International Value Fund is that of the Predecessor Fund (the Heartland International Value Fund a series of the Trust for Professional Managers), which commenced operations on 10/1/10.

Index Source: FactSet Research Systems Inc. and Russell®.

In the prospectus dated 5/1/2016, the Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement for the International Value Fund is 1.49%. The Advisor has contractually agreed to waive its management fees and/or reimburse expenses of the Fund to ensure that Total Annual Fund Operating Expenses for the Fund do not exceed 1.49% of the Fund's average net assets, through at least 5/1/2017, and subject thereafter to annual reapproval of the agreement by the Board of Directors. Without such waiver and/or reimbursements, the Total Annual Fund Operating Expenses would be 1.81%.

Past performance does not guarantee future results. Performance represents past performance; current returns may be lower or higher. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. All returns reflect reinvested dividends and capital gains distributions, but do not reflect the deduction of taxes that an investor would pay on distributions or redemptions. Subject to certain exceptions, shares of a Fund redeemed or exchanged within 90 days of purchase are subject to a 2% redemption fee. Performance does not reflect this fee, which if deducted would reduce an individual's return. To obtain performance through the most recent month end, call 800-432-7856 or visit heartlandadvisors.com.

DEFINITIONS

Active Share is the percentage of a portfolio that differs from a benchmark index.

Alpha is an annual measure of a portfolio's return in excess of the market return, both adjusted for risk. It is a measure of the manager's contribution to performance due to security selection. A positive annual Alpha indicates that the portfolio outperformed the market on a risk-adjusted basis, and a negative annual Alpha indicates the portfolio did worse than the market.

Beta is a measure of the sensitivity of a portfolio's rates of return against those of the market. A Beta less than 1.00 indicates volatility less than that of the market.

Correlation is a statistical measure of how two securities move in relation to one another. A measure of 1 means the securities are highly correlated and move in conjunction. A measure of 0 means the securities are not at all correlated and do not move in conjunction.

Information Ratio of a manager series vs. a benchmark series is the quotient of the annualized excess return and the annualized standard deviation of excess return. The Information Ratio measures the consistency with which a manager beats a benchmark.

Price/Book Value Ratio is calculated by dividing the market price of its stock by the company's per-share book value.

Price/Cash Flow Ratio represents the amount an investor is willing to pay for a dollar generated from a particular company's operations. It shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency.

Price/Earnings Ratio of a stock is calculated by dividing the current price of the stock by its trailing 12 months' earnings per share.

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Real Estate Investment Trust (REIT) is a security that sells like a stock on the major exchanges and invests in real estate directly, either through properties or mortgages.

Sharpe Ratio is the average return, less the risk-free return, divided by the standard deviation of return. The ratio measures the relationship of reward to risk in an investment strategy.

Standard Deviation is a measure of volatility of returns and is computed as the square root of the average squared deviation of the returns from the mean value of the return.

Total Debt/Total Capitalization Ratio of a stock is calculated by dividing the short- and long-term debt obligations of the company by its total capital, which is represented by the company's debt and shareholders' equity, which includes common stock, preferred stock, minority interest and net debt.

Russell Global® ex-US Large Cap Index measures the large-cap segment of the global equity universe as defined by Russell's leading style methodology, excluding companies assigned to the U.S.

Russell Global® ex-US Small Cap Index measures the small-cap segment of the global equity universe as defined by Russell, excluding companies assigned to the U.S.

S&P 500 Index is an index of 500 U.S. stocks chosen for market size, liquidity and industry group representation and is a widely used U.S. equity benchmark.

All indices mentioned are unmanaged. It is not possible to invest directly in an index.

INVESTMENT CONSIDERATIONS

The International Value Fund invests primarily in small foreign companies selected on a value basis. Such securities generally are more volatile and less liquid than those of larger companies. Foreign securities have additional risk, including but not limited to, exchange rate changes, political and economic upheaval, and relatively low market liquidity. These risks are magnified in emerging markets. Value investments are subject to the risk that their intrinsic values may not be recognized by the broad market.

INVESTMENT OBJECTIVE

The International Value Fund seeks long-term capital appreciation with modest current income.
